

# PROFESSIONAL GPS TRACKING SOLUTIONS

## IMPLEMENTATION OF AN INTERNALIZED GPS TRACKING SYSTEM

DITEX offers to set up your own internalized GPS Tracking system, to train your employees in the use of this system and to accompany you in the appropriation and integration of the GPS Tracking solution with your business context.

The deployment of this Solution within your company will allow you to:

1. **Update your operational process:** The recording in real time of tractors location and relevant events by the GPS devices will provide accurate data for carrying out suitable actions.
2. **Offer to your customers a GPS Tracking facility in your global offer:** Not only will this be a strong added value element, but you will also be able to keep control on tractors, and thus minimize the operational risks related.
3. **Guarantee to your customers a better reactivity in the after-sales back-up services:** Thanks to the alerts and reports configuration, you will be able to receive instant alerts and periodical reports based on relevant events. It will be therefore easier for you to perform preventive and curative services to you customers.
4. **The possibility for you to reduce the GPS Tracking cost of your company by at least 75%.**

### ADVANTAGES OF AN IN-HOUSE TRACKING SOLUTION

- ✓ **An All Inclusive Offer:** We accompany your company in the acquisition of all components necessary for the implementation of your tracking system, the production and consumption of the GPS Tracking services.
- ✓ **Low barrier at the entry:** All the required components will be purchased directly from manufacturers at factory prices, knowing that you will benefit our preferential pricing negotiated with those suppliers. Our expertise and technical support are remunerated by 30% of the total amount required to implement your Tracking system.
- ✓ **Substantial cost reductions from launching:** When a company has its own Tracking system, it is possible to reduce its monthly GPS Tracking cost by more than 75% per month per vehicle.
- ✓ **Possibility of integration of the Tracking software with other fleet management software:** GPS Tracking provides so much relevant data that could be exploited within the framework of Data Driven Management. Having your own tracking system makes it possible to integrate the tracking software with other business software to automate the production of decision support data.
- ✓ **Customised system:** Depending on the size of your vehicle fleet and the usage to be made with the Tracking solution, we design customised and scalable system according to your budget.
- ✓ **Confidentiality and long conservation of data:** All data related to the company's vehicles will be saved exclusively on the company's servers. This will allow the company to have total control over their use, disclosure and retention for as long as it wishes.
